

Aleksandr Kartak

Unity Developer & Technical Artist

Tbilisi, Georgia (GMT+4) · Remote · Russian native, English B2 · kartakcvc@gmail.com · Telegram @MATb_CONTROL
Portfolio matbcontrol.github.io · Code sample github.com/matbcontrol/massive-objects-showcase · All 14 projects

SUMMARY

Unity developer and technical artist, in game development since 2021: gameplay programming and systems architecture combined with shaders, VFX, lighting and rendering / performance optimization in URP and HDRP. Latest title, Aura Farming, is live on Steam (120+ reviews, Mostly Positive); earlier led the technical side of a 6-person indie team. Also shipped on Google Play and Yandex Games.

EXPERIENCE

Unity Developer / Technical Artist — Elven Empire Jan 2026 — Sep 2026

Aura Farming (on Steam under the studio's Fropy Studio label) · Apothecary's Dungeon · King of Merchants · remote

- Aura Farming (idle, released June 2026, 120+ Steam reviews, Mostly Positive): ability VFX and character auras (Shader Graph), UI and scene integration, post-processing, rendering optimization, idle economy with big numbers, save / load.
- Apothecary's Dungeon: custom grass rendering system with GPU instancing (DrawMeshInstancedIndirect), chunked loading and a shared HLSL wind include for grass, flowers and foliage.
- Custom URP shaders for water, vegetation, character outlines and environment; custom Renderer Features and lighting.
- Character animation and IK systems, DOTween-based UI transitions.

Founder & Lead Game Developer — Homo-Ludens Nov 2024 — Dec 2025

Reday-1 (unreleased, Steam page live) · team of 6

- Led technical development and architecture; implemented 10+ core systems: player controller, interaction, inventory, items, checkpoints, game states.
- Data-driven quest system (states, dependencies, ScriptableObject and JSON databases) integrated with NPCs and dialogue.
- Unity Editor tools for content creation, NPC navigation, save / load, scene streaming, custom audio with dynamic music.
- Runtime performance: object pooling, memory optimization, FPS troubleshooting.

Freelance Game Developer Sep 2021 — Present

Commercial, platform and game-jam projects

- Cyber Abyss: two builds from one codebase — Yandex Games (payments, rewarded ads, cloud saves) and a Web3 build for Base / Farcaster (wallet sign-in with ethers.js, Solidity contract, JS → Unity bridge).
- Mobile: gameplay programming on Nubik Shooter and Nubik Strategy (Google Play release).
- School Story: adapted and optimized Naninovel, Yandex SDK integration, passed platform moderation.
- Tech art for Burning Snow, DeathTower and other titles; rapid prototyping, including a complete game-jam prototype built solo in 12 hours.

SKILLS

Engine & code	Unity (URP, HDRP, Built-in), C#, UniTask, Zenject, Addressables, Jobs + Burst, assembly-definition architecture, unit tests
Tech art	HLSL, Shader Graph, custom Renderer Features, VFX (Shuriken, VFX Graph), lighting, post-processing, GPU instancing
Performance	Unity Profiler, Memory Profiler, Frame Debugger; draw calls, batching, memory / GC, mobile targets
Gameplay	quests, inventory, progression, idle economies, save / load, NPC navigation, client-server
Animation	Animator state machines, blend trees, IK, DOTween
Tools & platforms	Unity Editor tooling, ScriptableObjects / JSON pipelines, Git; Steam, Google Play, Yandex Games / WebGL

EDUCATION

Master's Program in Innovation Management	Peter the Great St. Petersburg Polytechnic University
Bachelor's Degree in Information Systems and Technologies	Ufa University of Science and Technology
